### FAQs

Product comparison	30
	31

**We've built customised aluminium gates for longer than any other New Zealand company. We have a lock on quality - and provide an extensive length and span of product range.**

Our experience with these products makes a big difference when it comes to delivering exacting professionalism. Whether you're looking at it in kilometres or millimetres, our products measure up to the highest of standards.

It's an outcome that's come about due to the big-picture view we've taken of our work and our place in this industry.

The considerable investment in the manufacturing facilities of our purpose-built fabrication and powder-coating plant was an important step for our company. This allows us to cut, drill, weld, pre-treat and powder-coat fencing and gates with speed and precision.

We now provide both custom-created fencing and gates and a range of exceptional ex-stock. These strong, corrosion-resistant products are ready for quick, easy shipping and installation throughout the country. Our distribution system has been developed over the years to ensure peace of mind to our customers - the fencing and gates will be there when you need them.

3

## Fast.

Quick delivery anywhere in New Zealand.

## Easy.

Clear, precise and prompt quotes.

## Convenient.

Large ex-stock range, ready when you are.

## Confident.

10-year warranty on all in-house manufacturing.

## Unlocking potential Our history

**Back in the 1980s  
the first archetype  
of Urban Group was  
formed. What started  
as a small steel  
engineering business  
soon grew and  
extended across the  
industry landscape.**

Since our start the focus has always been on quality workmanship and customer service. This is why we reevaluated our use of steel when it became clear the best solutions would be delivered through a change in a primary raw material. Delivering faster lead times, easier transport and handling and long-lasting powder-coated finishes, the decision to switch to aluminium was an easy one.

We employed a team of designers and project managers to work alongside the engineering and construction team and launched new aluminium manufacturing know-how into the commercial sector, ensuring our fence and gate range provided long-term solutions for a wide range of applications.

That's how, in the early 2000s, Urban Group emerged as a leading fabricator in aluminium construction. It's why in 2011, with our company growing fast, we opened a purpose-built factory and powder-coating plant in Levin. Since then we've progressively grown, expanding the boundaries of our expertise and capability.

We now supply a huge range of projects across the length and breadth of the country. While our family-owned business is in its third generation, our commitment to exceptional craft and care is still the foundation on which everything else is built.

## Making Connections Our Commitment

### We have over 30 years worth of technical know-how and service can-do making gates and fencing for New Zealanders.

It's why, from the smallest residential project to the largest commercial development, we know what works both here-and-now and for the years to come. It's how, for homes, schools, healthcare facilities, commercial buildings, indeed any property space requiring enclosure and exactness, we provide security, style and durability.

**Made right, right here.** The in-house manufacturing facilities of our purpose-built fabrication and powder-coating plant are second to none. We always look to improve our technological capability too, and take pride in the local expertise we have built.

**Custom-made solutions.** While we stock a range of gates and fences ready for immediate dispatch we also offer our specialist custom-made solutions. We don't just take orders and tick boxes. Our customer service team is with you from start to finish to ensure the result is one that fits perfectly.

**Service quality.** Unwavering dedication to customer service is the foundation on which our company was built. We are proud of the reputation we've built and the trust we have earned over the years.

# Fern

# Plain:

**Plain by name but attractive in value, it's the perfect choice for residential use when you need an entry-level panel that's strong, reliable and cost-effective.**

We've been supplying this panel for close to two decades now and it's safe to say, with the obvious strengths it provides, we'll be selling it for years to come. Compliant for pool fencing and quick to install in walkway and boundary applications, the Plain panel fits the budget as easily as it fits the landscape.

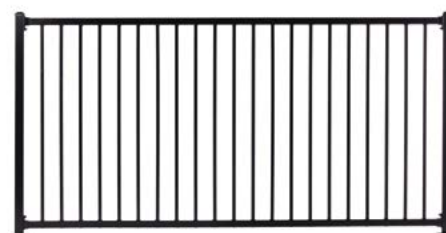

.10

## Ideal for:

- Pool fencing
- DIY installation
- Light residential use
- Cost-effective placement

## Features:

- Slim vertical tubes
- Profiled rails
- Corrosion-resistant aluminium
- 1200mm height

Heights:	1.2m
Width:	2.4m
Horizontals:	38x25mm
Verticals:	16mm rounds, 89mm gaps

# Duo:

**This residential panel adds an extra dimension to any property, the top section providing a stylish final look while also delivering additional security and functionality.**

The small spacing between the vertical tubes of this panel makes it difficult for small animals (and small humans) to get through, making the Duo ideal for pool fencing, pet containment, childcare and public spaces. Be it residential landscape fencing or school security fencing, this is a cost-effective and attractive solution.

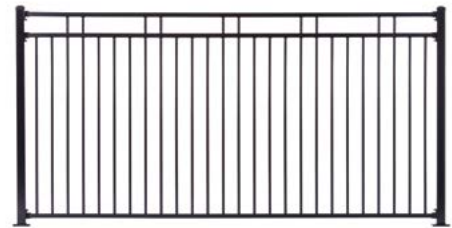

## Ideal for:

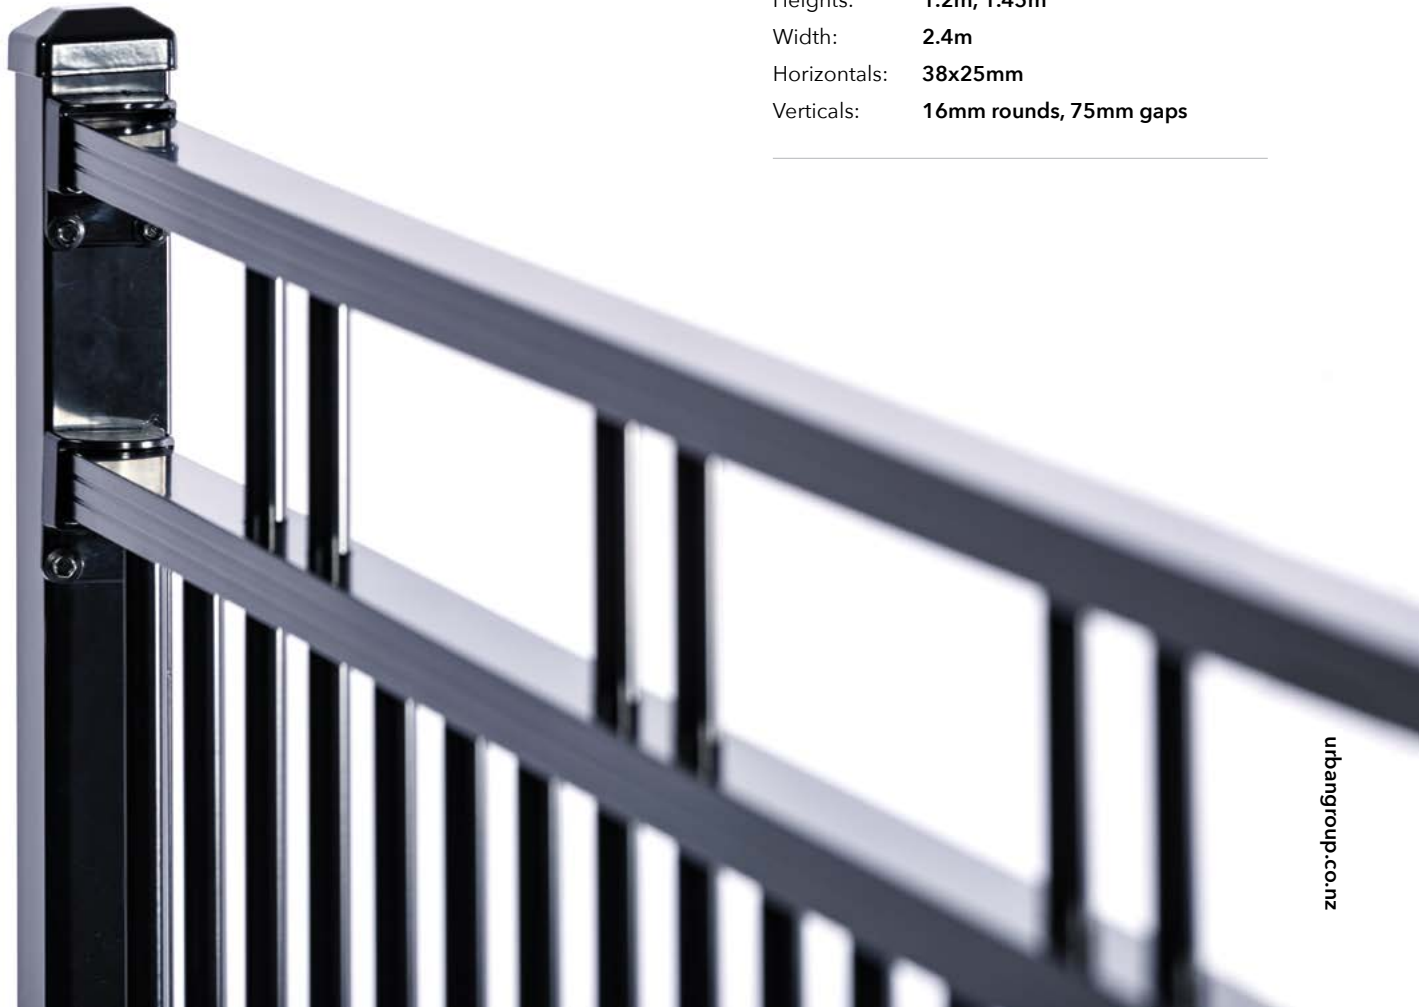

- Pool fencing compliance
- Childcare/parks
- Light residential use
- Cost-effective, long-term durability

## Features:

- Small gap between vertical tubes
- Corrosion-resistant easy-care
- Available in a range of colours
- 1200mm/1450mm height options

Heights: **1.2m, 1.45m**  
 Width: **2.4m**  
 Horizontals: **38x25mm**  
 Verticals: **16mm rounds, 75mm gaps**

# Premier:

**With built-tough aluminium and easy-on-the-eye proportions our Premier panel looks the part and delivers the goods year after year.**

The large profile of this panel and robust structure makes it suitable for a variety of end uses, everything from retaining walls to swimming pools, cycleways to child's play. Powder-coated in a range of available colours, this fence is a popular choice with a huge range of different companies and organisations throughout New Zealand. We're also the only company in New Zealand who provides this type of design as a raking fence panel too - so you can be assured it's also ideal for hilly terrain.

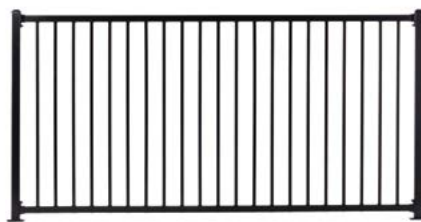

. 12

## Ideal for:

- Complies with pool standards
- Balustrade/retaining wall compliant
- Childcare/parks
- Cycleways/civil fencing

## Features:

- Hard to bend or dent rails
- Balanced aesthetic with bottom rail
- Available as raking panel
- Corrosion-resistant aluminium
- Exclusively available as raking panel up to 22 degrees

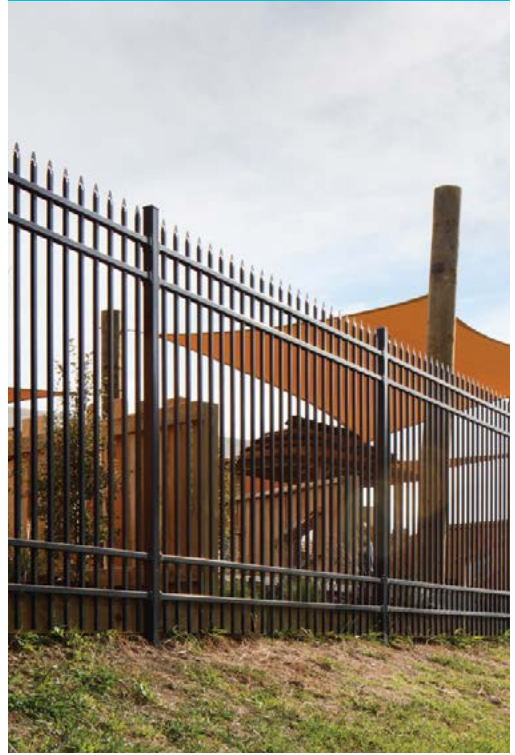

Heights:	<b>1m, 1.2m</b>
Width:	<b>2.4m</b>
Horizontals:	<b>40x40mm</b>
Verticals:	<b>19mm<sup>2</sup>, 91mm gaps</b>

# Secura:

It's coming up on two decades since we introduced the Secura panel. Since then the strong spiked tops of this panel have become the go-to fence for many a New Zealand business and highway.

Built-tough and made to last, the Secura fence provides a brilliant deterrent to would-be intruders. Combining a double rail for added strength, large, virtually indestructible vertical bars and additional spikes on the top, it's got all the design features needed for a security fence and is available as a raking panel - which allows it to rake at an angle up to 20 degrees. It's well-designed for a great-looking installation, making it ideal for road frontages too. Sliding, cantilever and swing entry gates can also be made to match - ensuring seamless and secure boundary protection.

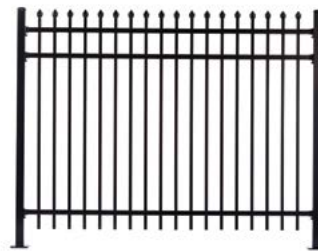

## Ideal for:

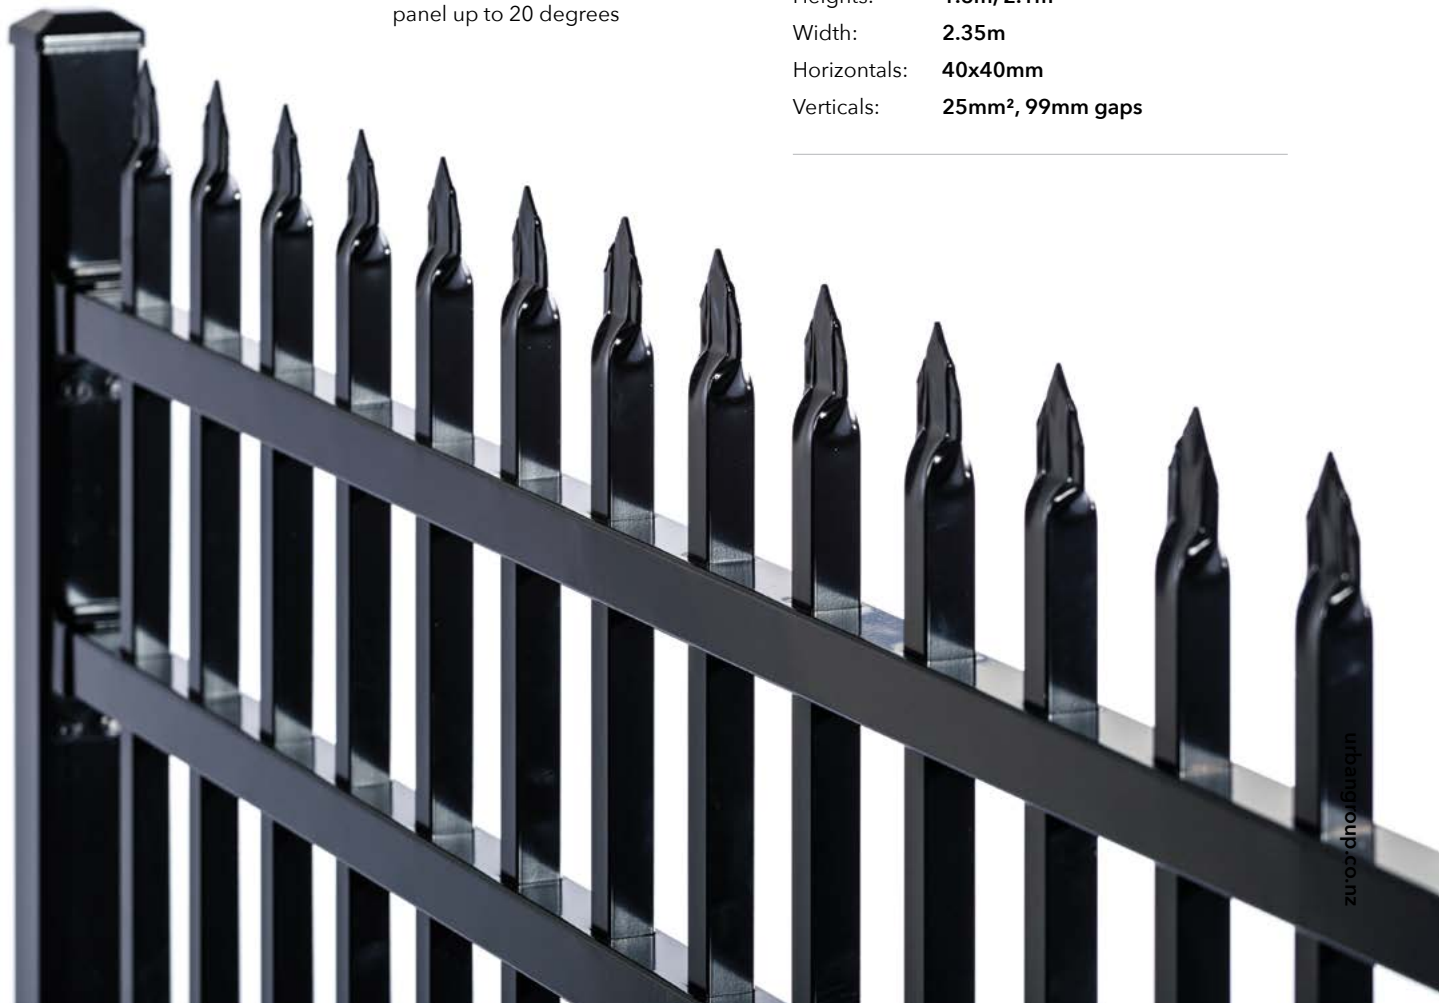

- Industrial fencing
- Commercial security fencing
- Road frontages
- Retail

## Features:

- Welded, powder-coated aluminium construction
- Double rail for added strength
- Spiked-top to deter unwanted hand-holds
- Available in 1800mm/2100mm heights
- Exclusively available as raking panel up to 20 degrees

Heights: **1.8m, 2.1m**  
 Width: **2.35m**  
 Horizontals: **40x40mm**  
 Verticals: **25mm<sup>2</sup>, 99mm gaps**

# Assure:

**Stylish, secure and simple with its adaptability the Assure panel looks good no matter which way you look at it. Being as popular as it has over these last few years, there have certainly been a lot more people looking at it recently.**

Being able to turn the panel upside down is a big part of this panels appeal –and so too is the option to use Assure raking panels to meet the demands of steep terrain. Residential placement often uses the panel with the studded side up, and the flat-top option makes it ideal for the school and childcare environment. Strong and robust, delivering years of maintenance-free security you'll find that no matter what way Assure goes, it's always right side up.

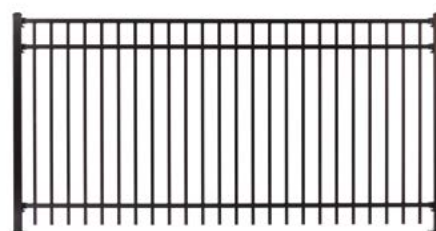

.14

## Ideal for:

- Residential and pool fencing
- Balustrade/retaining wall compliant
- Childcare/schools
- Cycleways/civil fencing

## Features:

- Choose the top to suit
- Strong, robust construction
- Lightweight, easy to install
- Available 1200mm/1500mm/1750mm heights
- Exclusively available as raking panel up to 30 degrees

Heights:	1.2m, 1.5m, 1.75m
Width:	2.4m
Horizontals:	38x25mm
Verticals:	19mm <sup>2</sup> , 80mm gaps

# Assure HD:

Since we added this panel in 2016 other companies have released their own versions. Which makes sense - it's very popular. However when you need the most robust aluminium fence panel available, stick with the original.

With a double top rail for added strength and large vertical bars that can't easily be damaged the Assure HD panel has been designed to comply with MOE specifications for schools as well as meeting pool regulations for residential use. Providing first-rate durability and security while avoiding an overly threatening appearance, it's used frequently in commercial applications as well. We've stayed ahead of the competition with our raking version of the Assure HD as well - this option can rake up to 20 degrees to accommodate extremely steep terrain.

## Ideal for:

- Designed purposely for schools
- Balustrade/retaining wall compliant
- Childcare/parks
- Cycleways/civil fencing

## Features:

- Double top rail for added strength
- Heavy-duty construction
- Large anti-climb gap in vertical bars
- Available in 1500mm/1800mm heights
- Exclusively available as raking panel up to 20 degrees

Heights:	1.5m & 1.8m
Width:	2.35m
Horizontals:	40x40mm
Verticals:	25mm <sup>2</sup> , 99mm gaps

.15

# Protek:

**The Protek panel says what it means and means what it says – protecting New Zealand's properties with a strong and cost-effective perimeter solution.**

This is the global choice for security fencing, its sophisticated design and heavy-duty construction helping companies keep out unwanted visitors. The large wire gauge of Protek is certainly tough to cut through when compared with traditional chain link fencing. The close centres of its welded steel wire mesh panels and anti-climb spikes on top are enough to dissuade even the most determined of intruders. It's as attractive as it is effective too, available in both a black powder coat or a galvanised finish.

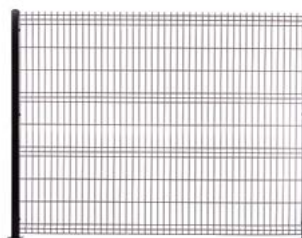

.16

## Ideal for:

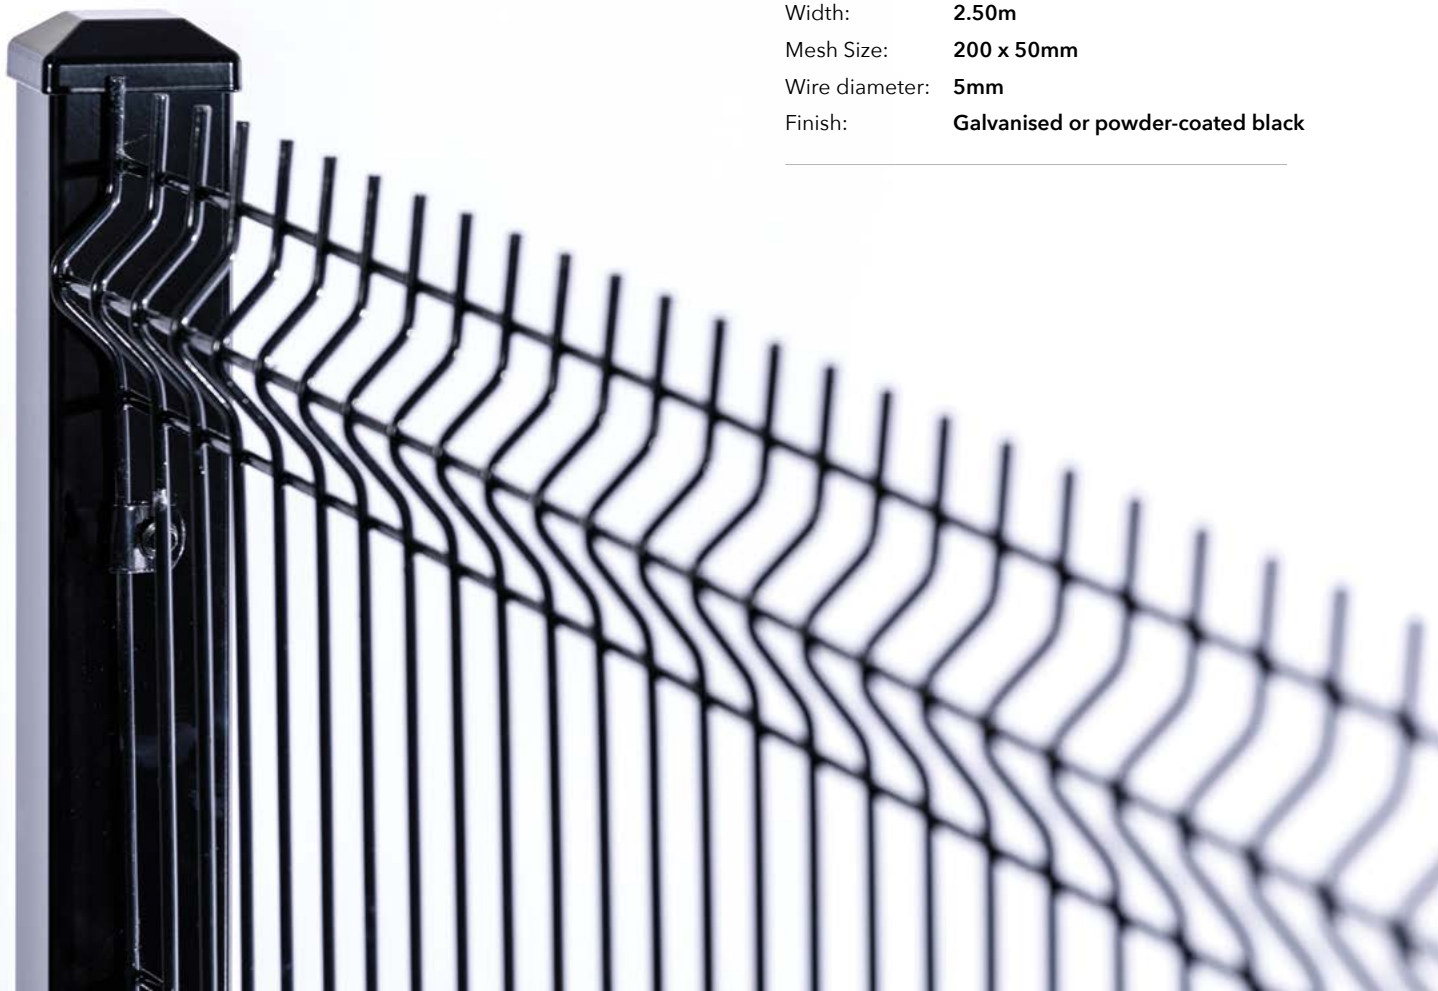

- Industrial/commercial security
- Heavy equipment screening
- Internal dividers
- Airports/high security areas

## Features:

- Low cost fencing option
- Available in exclusive HDG finish
- Anti-climb spikes or smooth top

Heights:	1.45m, 1.95m
Width:	2.50m
Mesh Size:	200 x 50mm
Wire diameter:	5mm
Finish:	Galvanised or powder-coated black

# Spartan:

**Our Spartan panel is lining up and marching down (and around) our country's motorways, schools, parks and civil projects.**

While this type of design has been part of the New Zealand landscape for decades we didn't rush in with introducing our own version. Instead we checked and double-checked production and distribution processes to ensure both quantity and quality standards could be consistently met.

This fence type is unique to our country, and is mostly used on motorway projects as a separation between the cycle-way/ footpath and the main motorway. Simple in design but effective in action, it is a no-nonsense, cost-effective solution for large-scale fencing projects.

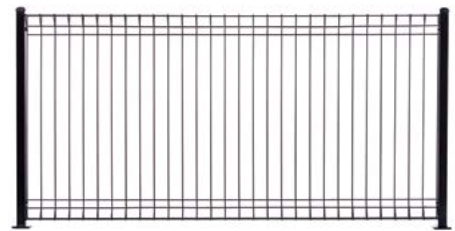

## Ideal for:

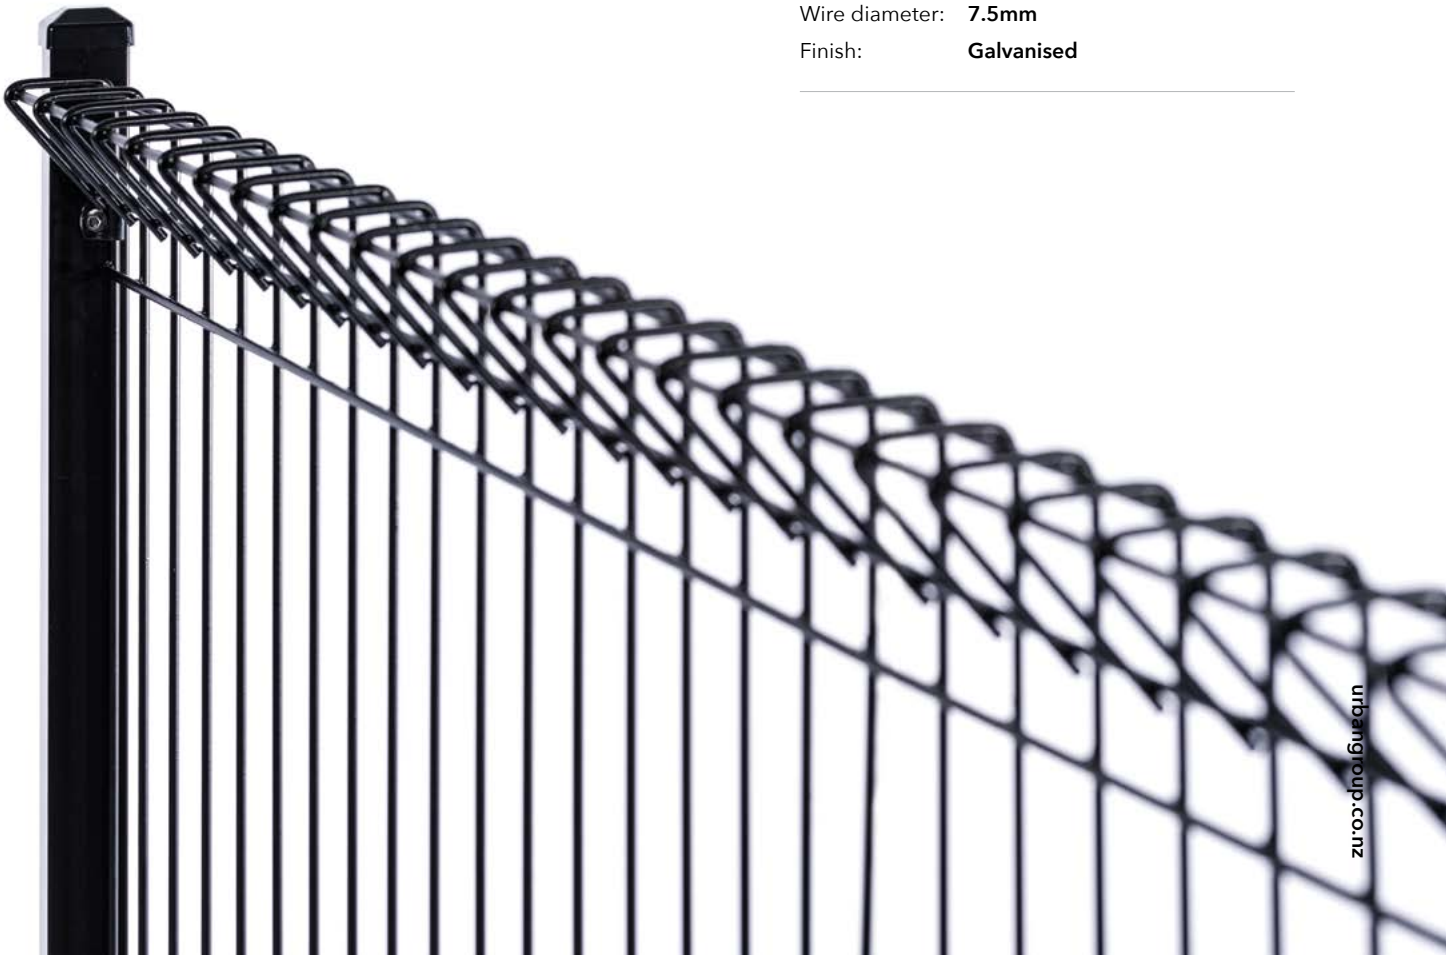

- Schools, motorways, parks
- NZTA compliance
- Pool compliance
- A cost effective fencing solution

## Features:

- High quality HDG finish
- Available in black or galvanised finish
- Strong but lightweight, easy to install
- 1200mm/1300mm/1500mm/1800mm height range

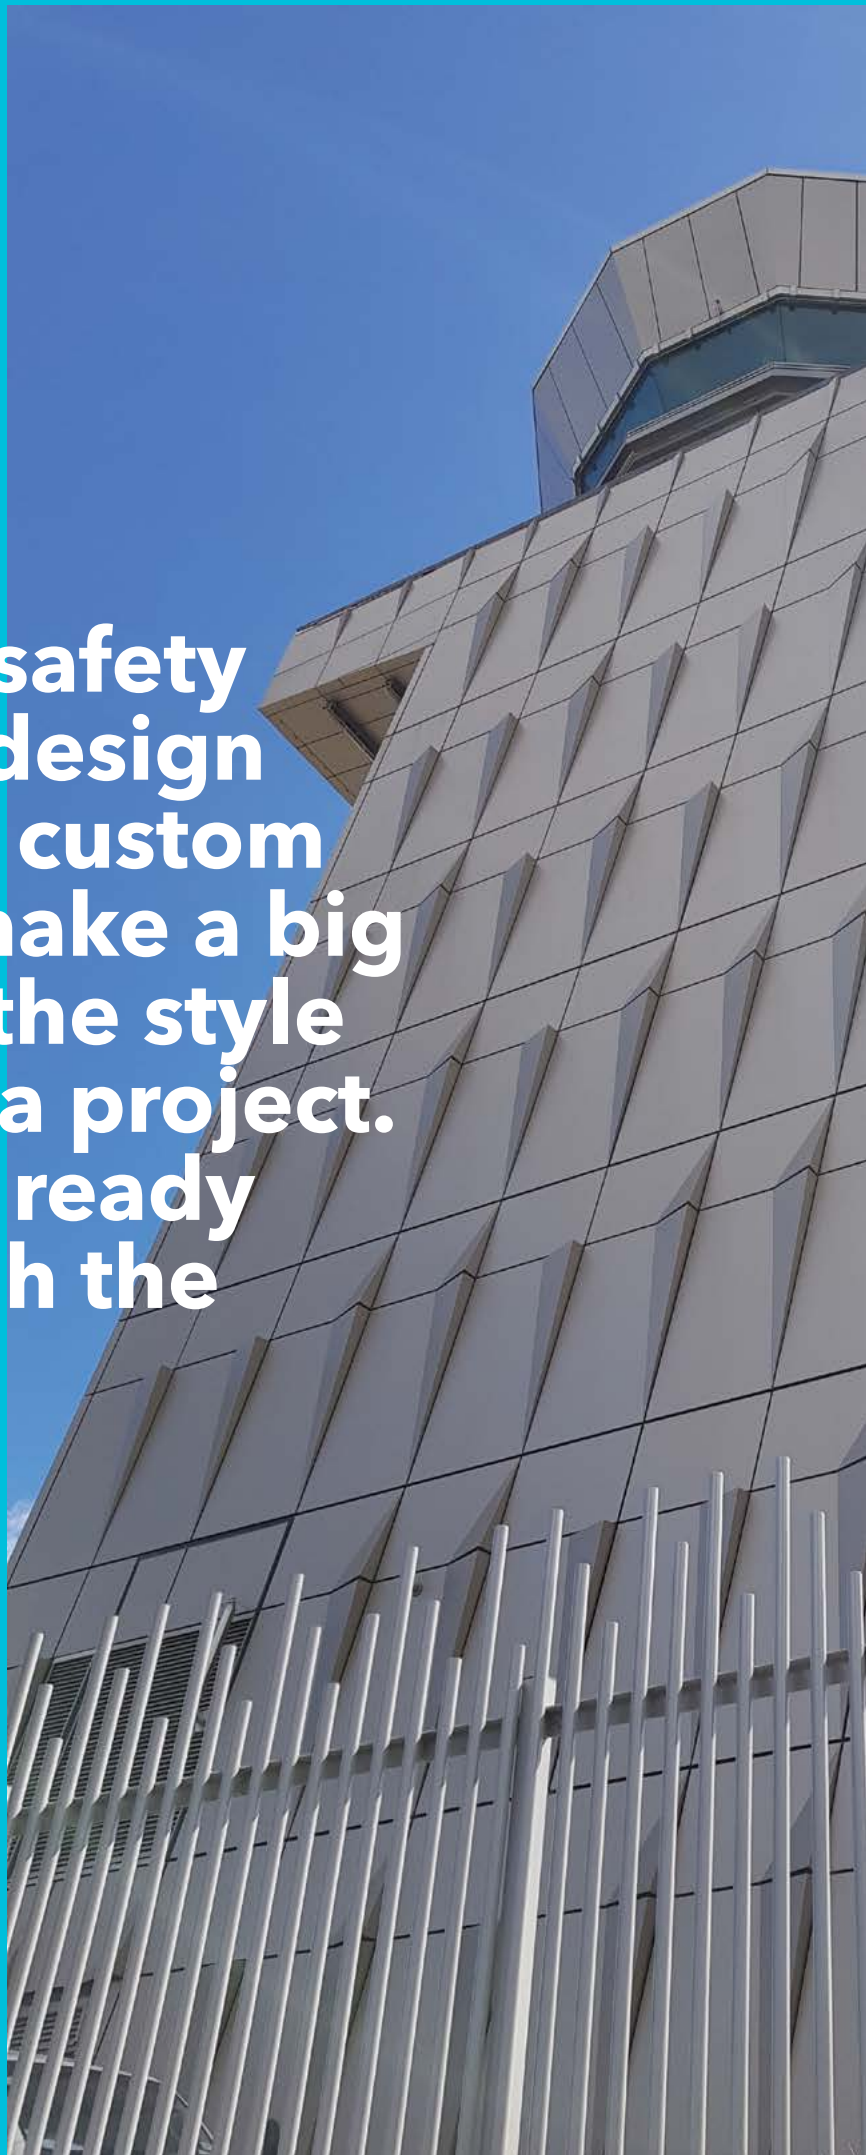

Heights: 1.2m, 1.3m, 1.5m, 1.8m  
 Width: 2.4m  
 Wire diameter: 7.5mm  
 Finish: Galvanised

## Custom Fencing

**Be it to meet safety standards or design requirements custom fencing can make a big difference in the style and shape of a project. We're always ready to talk through the options.**

With our in-house production capability we can design, create and test prototypes to ensure the final installation fits the brief and meets every measure. If you have any questions about unique design concepts please get in touch.

# Ga

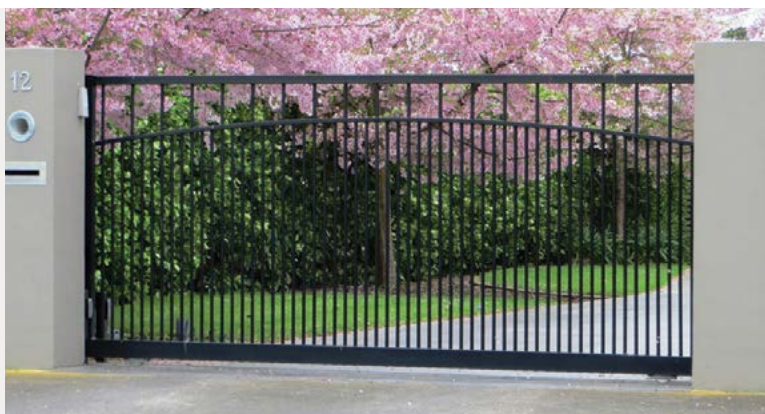

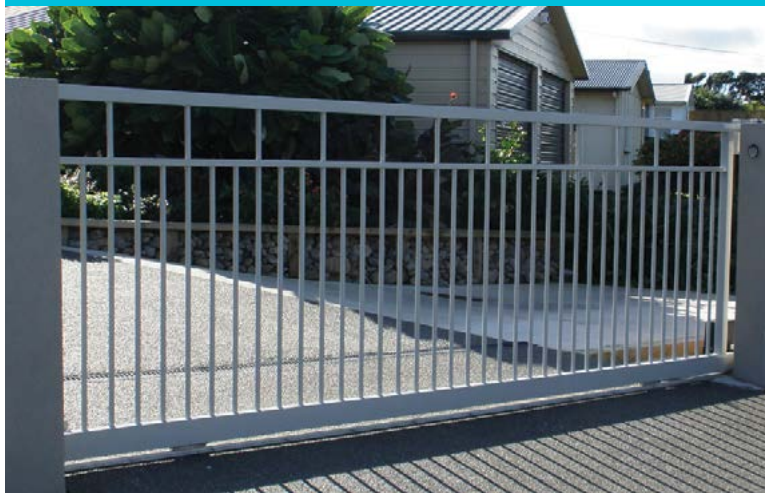

# Traditional Gates

- Custom range of gates available
- Made to suit a wide variety of properties in durable aluminium
- Powder coated in your choice of colour
- Choose from swinging, sliding or automated
- Stay timeless – there's a reason it's called 'classic' design

# Louvre Gates

- Because first impressions last
- Bold, beautiful and adaptable in aesthetic look
- Protect privacy without compromising style
- Ideal for both contemporary and traditional homes
- Powder coated in your colour choice, swinging, sliding or automated

# Slat Gates

- Clean, crisp lines deliver a contemporary look
- Cost-effective, low-maintenance alternative to timber won't warp or rot
- Custom-made to order in any size
- Powder coated in your choice of colour
- Available as single, double, swing or sliding models

# TVG Gates

- Low-maintenance aluminium tongue and groove fabricated, powder coated and ready to install
- Light in weight but heavy-duty in strength, won't warp or rot like timber
- Matches perfectly with wooden paling fences and solid walls
- Can be horizontally or vertically mounted

.25

# Panel Gates

- Architectural design ensures strong yet subdued aesthetic
- Built-tough dependability and durability
- When you want (or need) total privacy from weird neighbours
- Perfectly compliment garage doors and other similar design features
- Ideal for both residential and commercial applications

urbangroup.co.nz

# Security Gates

- Made to measure, built to last
- Precision engineering to exacting architectural specification
- Available as sliding, cantilevered or swing entry, designed for gate automation
- Welded, powder coated aluminium construction: long lasting, rust free
- If Batman was real he'd have something like this (with lasers)
- Made for the most challenging environments

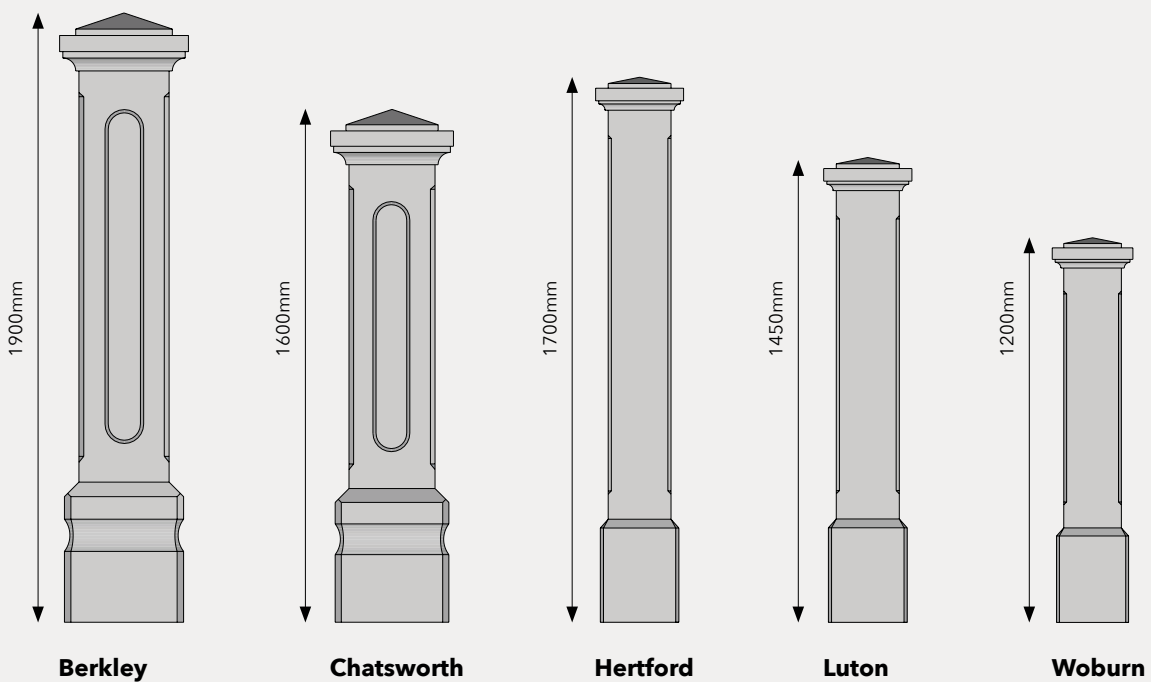

# Stoneway Pillars

- The look of solid stone without the weight, cost or hassle
- Designed for DIY installation - simply fill with concrete
- Pre-textured casing over a reinforced cage
- Solid-as, so easy to hang fencing and gates on
- Might be what's meant when describing an 'upstanding pillar of the community'

## Profile options

# Automation & Hardware

We have a large range of hardware and automation options and are constantly working in research and development to deliver exciting new products to market.

## Cantilever Hardware

- Ideal for locations with high traffic movement or an unstable ground surface
- A must-have for industrial sites
- Italian technology made with strict quality-control processes
- Suitable for gates up to 12 metres wide and 2000kg

## Sliding Gate Hardware

- Provides full kit, including wheels, track, catches and stops
- Twin bearing Italian wheels with various configurations available
- Suitable for gates up to 2000kg, 14 metres wide
- Doesn't include Star Trek door-whooshing sound when opening

## Swing Gate Automation

- Adjustable and bearing hinges
- Italian and NZ Made
- Strong, build tough quality
- Suitable for swing gates up to 6 metres wide and 800kg

## D&D Pool Gate Hardware

- Full range available
- Pool latches, self closing hinges and double sided locks
- Possibly helps make bombs, manus, cannonballs, staples better
- Quality assured construction

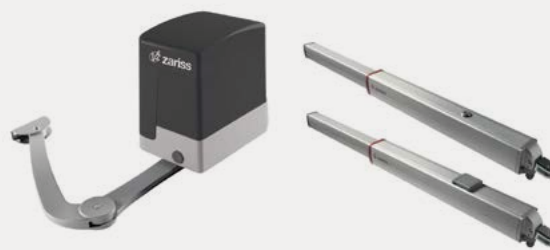

## V2 Sliding Gate Automation

- For gates weighing up to 4000kg
- Obstacle detection for safe-as-houses gates
- 3x different motors available for different applications
- Automatic self-learning of open and close times

## V2 Swing Gate Automation

- Safe, effective, efficient
- For gates up to 6m leafs, 500kg per leaf
- 7x different motor styles with 13 different application options
- Make a grand entrance

## V2 App

- Program your gate from your phone
- Suitable for all V2 products
- Connect to the control unit remotely
- Ideal for installers

# FAQ's

## Construction

### Why is aluminium the preferred raw material?

Aluminium is lightweight but strong, easy to work with and gives the best surface finish once powder coated. Unlike steel the surface is smooth and naturally resistant to rust. So you can be sure your fences and gates will last a lifetime.

### Where are the gates and fences built?

All our custom gates and fences are made at our Levin facility. We have invested in our machinery to ensure our in-house production delivers the quickest lead times and best quality product.

### How many colours are available?

We have literally hundreds! We can powder-coat any colour from the Dulux or the Interpon range.

### Is there a warranty available?

For all custom products we manufacture we offer a ten-year warranty on powder coating and workmanship. Imported products have a one-year warranty period.

### Does your fencing meet all necessary codes?

Of course it does - F4, B2, C3 just to mention a few. We also have options to meet balustrade and pool regulations and all Ministry of Education specifications. The only code our fencing doesn't meet is morse code. But, if you tap them properly, who knows?

## Shipping

### How fast can you ship gates and fences around New Zealand?

We always aim to ship product in 1 to 2 days in the North Island and 2 to 3 days in the South Island. We are also exploring new distribution opportunities in the South Island to help bring shipping times here into line with the North Island.

### Are there any locations where you don't ship?

To put it simply: no. From the top to the bottom of the country if you need it, we'll find a way to get it to you.

### How do you ship?

If the order is relatively small we ship by courier - this is the fastest and most efficient way of getting the fencing from A to B. For larger orders we use specialised carriers as they have the experience and resources to move in bulk.

### How much does shipping cost?

We negotiate with shipping companies to get the very best deal for our customers. It's important to remember here that we don't work for the shipping companies - they work for us.

## Installation

### If I'm doing it myself what tools do I need?

At a minimum you will need a battery drill with a tek driver, drill bits, level & shovel. You will also need to source some concrete (or ready-mix/rapid set if you only have a few holes to do).

### How long should it take?

How long is a piece of string? If it's your first fence you can expect to do between 10 and 20 metres a day. If you're a whiz you could possibly do up to 50 metres of fencing a day.

### How will I attach this fence to an existing column or wall?

Be sure to let us know your requirements. We have posts that have flanges for these situations.

### I am installing on a sloping land. What do I need to consider?

First, please let us know the approximate slope so we can recommend the right type of fencing. An important consideration here is that when the panels are sloping the post gaps reduce. So you will need to make an allowance for extra materials from the get-go.

### Ok, something's gone wrong - what do I do now?

Call your father in law! Or it may be preferable to try us on 0800 80 33 26. We have experts all over the country, ready to help with any and all information on gate and fence installation.
